XENONSTACK PROJECTS

- **Serverless Backend Development**:
  Designed and implemented a serverless backend for a social media application (available on the App Store and Play Store) using **Golang**, Postgres, and various AWS services like S3, Lambda, Redis, RDS, SNS, and Amazon Textract.

- **Custom App Backend (Python + GCP)**:
  Built the entire backend for a custom app distributed via the App Store using Python, Postgres, and MinIO.
  Developed programmatic Kubernetes jobs for parallel job execution.
  Integrated Google Cloud Platform (GCP) services, including Pub/Sub Lite, Cloud Functions, Firestore, and Google Cloud Storage.
  Implemented Azure IDP for secure organizational access control.

- **Loan Lending Platform**:
  Architected and developed the backend for a loan lending website using Python, Postgres, MinIO, and AI-powered agents.

- **Full-Stack Projects**:
  Worked on multiple websites, managing both backend in Golang and frontend development using React.
  Designed sleek UI components with Figma.
  Integrated AI models from Hugging Face and developed AI-powered agents for NLP-based applications like a resume reader.
